FORWARD-LOOKING STATEMENTS

This presentation contains forward-looking statements and forward-looking information (collectively, “forward-looking statements”) within the meaning of applicable Canadian securities legislation. All statements, other than statements of historical fact, including, without limitation, statements regarding any potential increase in shareholder value through the acquisition of undervalued precious metal deposits for development, joint venture or later disposition, the potential to partner with mine developers to achieve production at any of the Company’s properties (existing or future); the potential for the capital costs associated with any of the Company’s existing or future properties to be low; the potential for the Company to outline resources at any of its existing or future properties, or to be able to increase any such resources in the future; concerning the economic outlook for the mining industry and the Company’s expectations regarding metal prices and production and the appropriate time to acquire precious metal projects, the liquidity and capital resources and planned expenditures by the Company; the anticipated content, commencement, timing and cost of exploration programs, anticipated exploration program results and the anticipated business plans and timing of future activities of the Company, are forward-looking statements. Forward-looking statements are based on a number of assumptions which may prove incorrect, including, but not limited to, assumptions about the level and volatility of the price of metals; the timing of the receipt of regulatory and governmental approvals; permits and authorizations necessary to implement and carry on the Company’s planned exploration programs at its properties; future economic and market conditions; the Company’s ability to attract and retain key staff; the ongoing relations of the Company with its underlying lessors, local communities and applicable regulatory agencies; and the impact of the COVID-19 pandemic on the Canadian and worldwide economy, the Company’s workforce, world-wide demand for commodities and the Company’s business generally.

Accordingly, the Company cautions that any forward-looking statements are not guarantees of future results or performance, and that actual results may differ, and such differences may be material, from those set out in the forward-looking statements as a result of, among other factors, variations in the nature, quality and quantity of any mineral deposits that may be located, the Company’s inability to obtain any necessary permits, consents or authorizations required for its activities, material adverse changes in economic and market conditions, changes in the regulatory environment and other government actions, fluctuations in commodity prices and exchange rates, the inability of the Company to raise the necessary capital for its ongoing operations, and business and operational risks normal in the mineral exploration, development and mining industries, as well as the risks and uncertainties disclosed in the Company’s most recent management discussion and analysis filed with various provincial securities commissions in Canada, available at www.sedar.com. The Company undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date of this presentation or to reflect the occurrence of unanticipated events except as required by law. All subsequent written or oral forward-looking statements attributable to the Company or any person acting on its behalf are qualified by the cautionary statements herein.

Presentation of Resource Estimates. This presentation uses the terms “indicated” and “inferred” in connection with its resource presentations, as defined in accordance with National Instrument 43-101 Standards of Disclosure for Mineral Projects (“NI 43-101”) under guidelines set out in the Canadian Institute of Mining, Metallurgy and Petroleum (the “CIM”) Standards on Mineral Resources and Mineral Reserves adopted by the CIM Council on May 10, 2014. An Inferred Mineral Resource is that part of a Mineral Resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade or quality continuity. An Inferred Mineral Resource has a lower level of confidence than that applying to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It is reasonably expected that the majority of Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration. An Indicated Mineral Resource is that part of a Mineral Resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of Modifying Factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing and is sufficient to assume geological and grade or quality continuity between points of observation. An Indicated Mineral Resource has a lower level of confidence than that applying to a Measured Mineral Resource and may only be converted to a Probable Mineral Reserve. All of Aldebaran’s exploration programs and the related disclosure of information of technical or scientific nature are prepared by, or prepared under the direct supervision of, Dr. Kevin B. Heather, FAusIMM, Aldebaran’s Chief Geological Officer, who is a “qualified person” as defined in NI 43-101. Dr. Heather has reviewed and approved the technical information contained in this presentation and has approved the disclosure herein.

2021: A SIGNIFICANT RESOURCE WITH POTENTIAL FOR GROWTH

- A total of 255 drill holes (119,052 m) completed at Altar between 1995 and 2020. Aldebaran's 2021 Resource Estimate showed one of the largest undeveloped copper projects in the hands of a junior.
- Results from a 3D IP/Resistivity and MT geophysical survey completed during the 2021/2022 field season suggested growth potential.

2021-2024: SUSTAINED DRILLING SUCCESS AT ALTAR UNITED

- Over 63,000 m of drilling completed between the 2021 and 2024 Resource Estimates. Drilling primarily focused on the geophysical anomaly and Altar United trend. Highlights include:

REGIONAL EXPLORATION

ALTAR HAS A LARGE LAND PACKAGE WITH BLUE SKY POTENTIAL

QDM South

- Potential extension of the QDM/Radio system
- Multi-element geochemical anomaly, accompanied by the occurrence of strong alteration and veining in outcrop
- Favourable resistivity anomaly from the DCIP geophysics

Cenicero

- Strong multi-element geochemical anomaly
- Quartz veining observed at surface

SE Gold

- Alteration and quartz veining at surface
- Multi-element geochemical anomaly indicates potential for an epithermal Au-Ag system

Altar North

- Proven Au-Cu porphyry system with a total of 3,135 m drilling completed

The Gap

- Favourable magnetic and resistivity features in the geophysics
- Minor copper oxides and altered rocks at surface

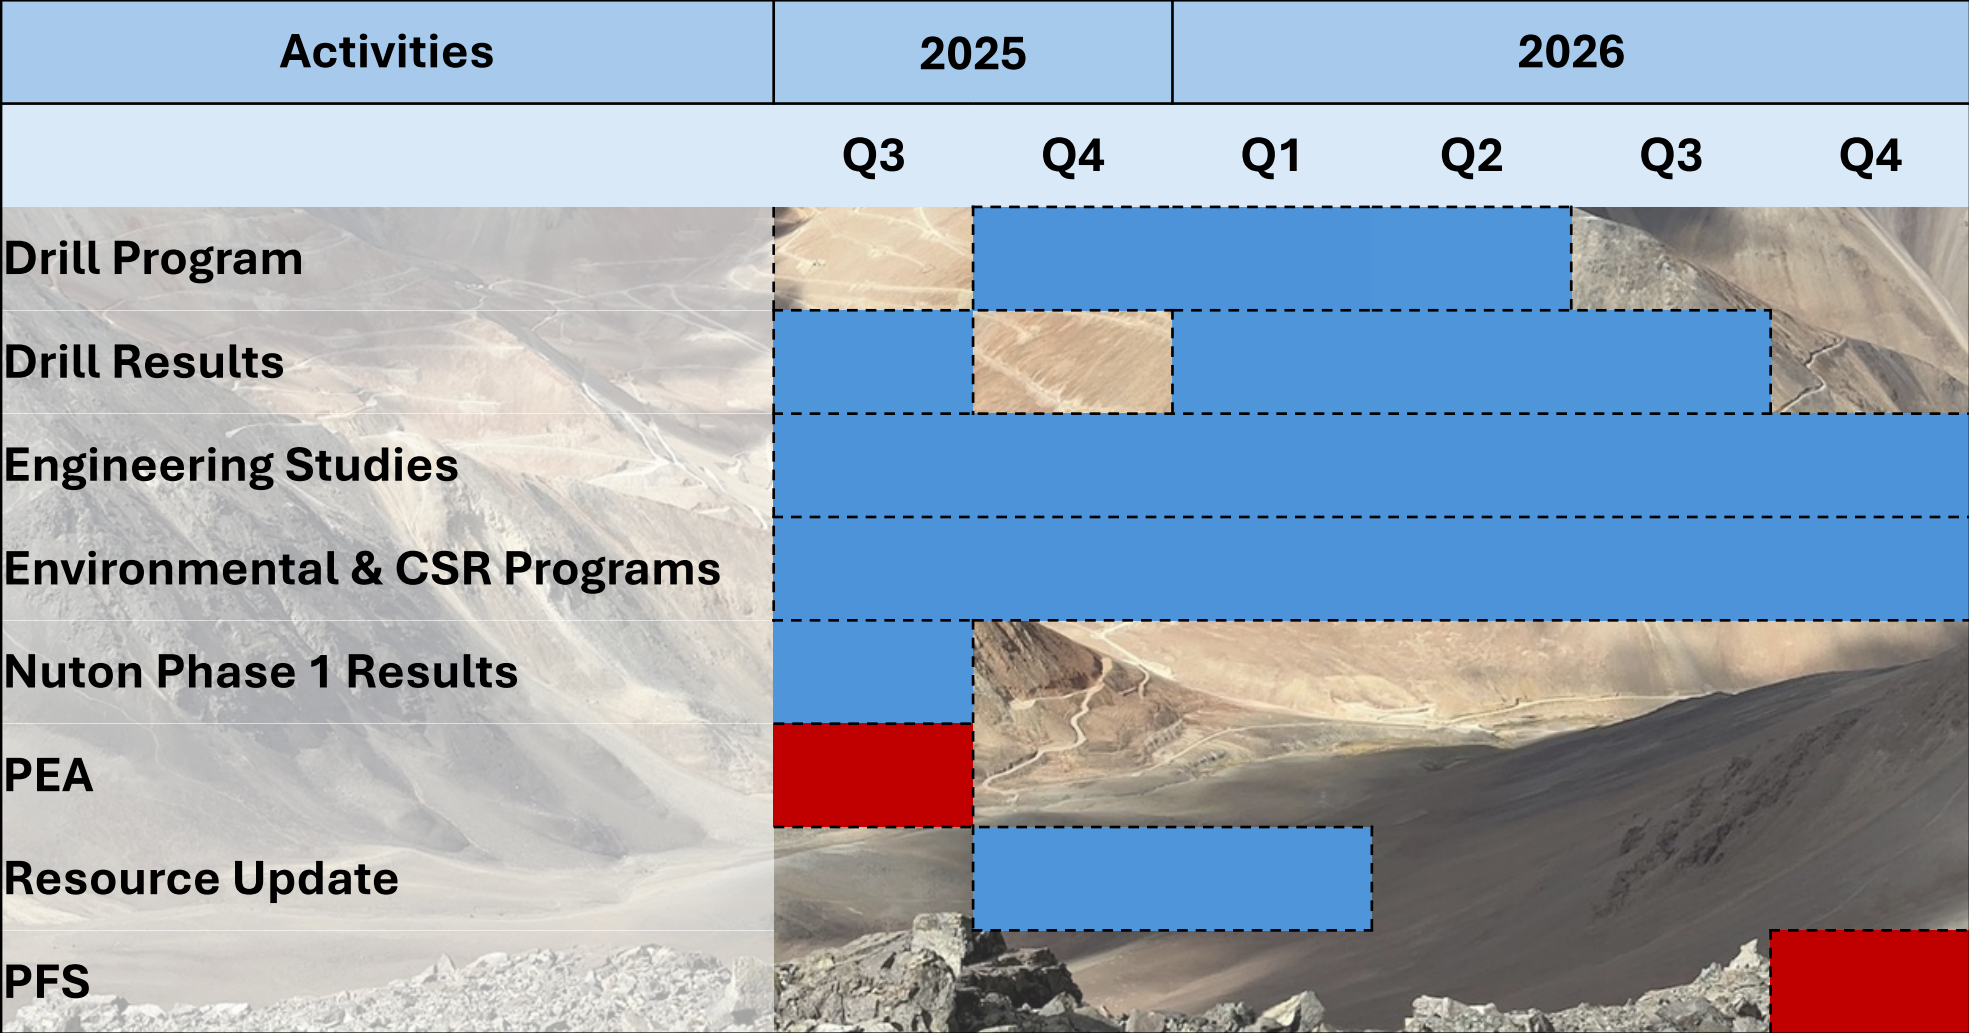

- QDM Gold is a near-surface gold deposit containing 590,000 Oz's of AuEq at 0.91 g/t AuEq¹
- Radio Porphyry is a porphyry intrusion sitting below the QDM gold deposit
- Radio Porphyry is not currently included in resource estimates but has seen significant drilling in prior years (some by Sibanye, some by Aldebaran)
- When the Company completes an updated resource estimate, it is expected Radio Porphyry will add resources in addition to any expansion to the in-pit resources at Altar Central, Altar East and Altar United

¹ – Figures from the 2021 Mineral Resource Estimate, to be updated in 2025. See press release from March 22, 2021, for details.

PROJECT TIMELINE

MULTIPLE CATALYSTS AS ALDEBARAN ADVANCES ALTAR

WHERE DOES ALTAR RANK IN SIZE?
THE 5TH LARGEST COPPER PROJECT HELD BY A JUNIOR

“Altar is one of the largest undeveloped Cu-Au deposits in the world and we believe it should be sought after by major mining companies.”

HOW DOES DERISKING ALTAR ADD VALUE?

COPPER PROJECTS OFTEN BECOME MORE VALUABLE WHEN DERISKED

Median Transaction Price (EV/lb CuEq) Of Copper Projects By Stage (2009-2024)

Advancing copper projects through economic studies can add significant value to the eventual sale price

Majors are willing to pay more to acquire projects that have been derisked with sound economics

Average sale price for copper projects is ~US\$0.04 EV/lb CuEq. Aldebaran has re-rate potential as it advances Altar

CREATING VALUE FOR ALL STAKEHOLDER CONTRIBUTING TO SUSTAINABLY DEVELOPMENT

ACTIVELY INVOLVED IN COMMUNITY AND ENVIRONMENTAL PROJECTS

ALDEBARAN has a **collaborative approach on the ground to work on long-term projects** with local communities, supporting improved health, education and environmental initiatives.

LARGE DEPOSIT WITH POTENTIAL FOR MULTI-GENERATIONAL MINE LIFE

Aldebaran is advancing Altar as a world-class copper-gold deposit that has the potential to have a long mine life which would generate **local employment and support for the regional economy in San Juan for generations to come.**

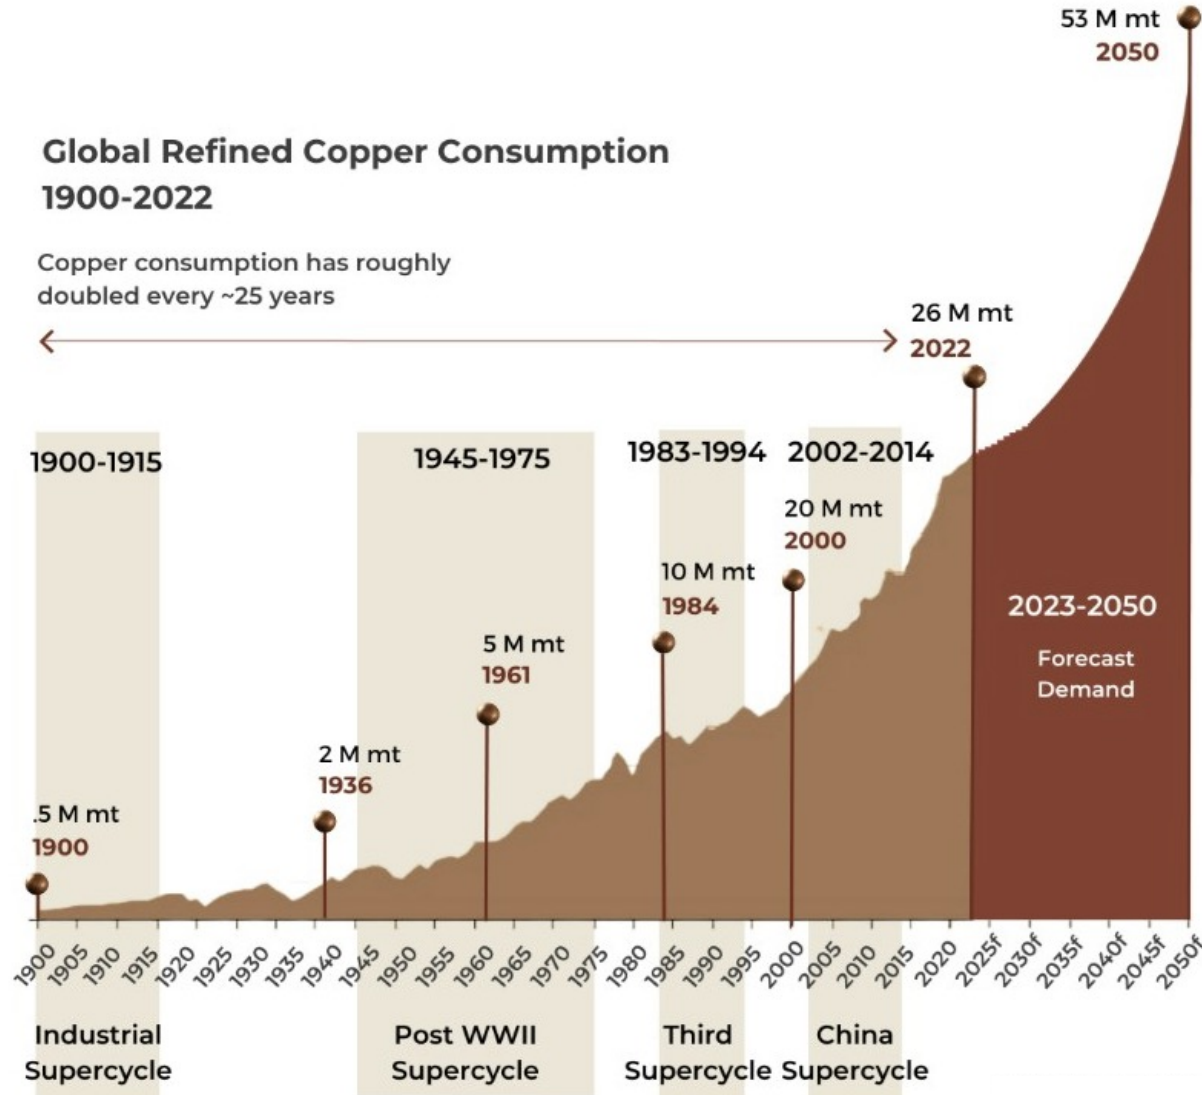

A TECHNICAL APPROACH THAT GENERATES VALUE

Aldebaran's team has decades of experience working for major mining companies in the Andean cordillera. Unlike many junior exploration companies, **Aldebaran collects and utilizes data to the standards of a major mining company which adds considerable value to potential acquirers.**

WHY COPPER?

INCREASING DEMAND AND DIMINISHING SUPPLY

More copper required over next 25 years than has been produced over the last 120 years

Six new large mines required every year to meet coming demand

Lack of quality projects available to bring into production
